

The Enterprise Leader for Hybrid Cloud Management

Delivering Simplicity, Automation, and Control

CloudBolt's hybrid cloud management platform enables enterprise IT departments to build, deploy, and manage private and public clouds quickly and efficiently. CloudBolt helps you manage your hybrid, multi-cloud environments, while empowering your developers with self-service IT. By turning your enterprise IT into the cloud provider, you'll unleash a responsive, agile alternative to runaway IT that gives your DevOps teams what they want. The result? Greater IT efficiency. Better control. More business agility.

Key Features

Comprehensive Hybrid Cloud Management

Consolidate public and private cloud environments under one user portal where users consume, manage, and track IT resources regardless of where and how they're hosted. You'll no longer have to grapple with teams attempting to manage and access resources in separate environments. Support more than 20+ environments from a centralized catalog while maintaining granular visibility and control.

Flexible Self-Service IT

No longer will your users need to file a ticket or wait for resources to be provisioned. Through a role-based access control (RBAC) portal, users provision and orchestrate resources within minutes. As a result, you'll orchestrate compute, storage, and complex multi-tier application stacks with a few clicks. Transform your IT from a cost center to a business partner without losing control.

Centralized Management

CloudBolt delivers extensive management capabilities across your complete hybrid cloud, multi-cloud, and Kubernetes environments. Admins can perform a wide variety of actions from the server screen, including Day Two services such as adding new resources or scaling existing ones with complete usage insights.

Brownfield Deployments

Auto Discovery upon connecting to a public cloud or private virtualization infrastructure. CloudBolt synchronizes all discovered resources to its database. After a server has been imported and is under the management of CloudBolt, any modifications, whether made from within CloudBolt or outside of CloudBolt, will be tracked and reported.

Comprehensive Cost Transparency

Whether it's a public cloud or the private datacenter, IT resources cost money. Provide end-users with the ability to see and understand what they're spending upfront before it's too late. Optimize your cloud spend automatically and don't waste money paying for what you don't need. Learn where you're overprovisioning and underutilizing resources and rightsize using trend information and notifications. CloudBolt also provides the ability to set spend quota on individual user groups to ensure spending doesn't exceed a specified threshold.

Service Catalog

Deploy complete services (any combination of servers, network components & scripts) from the simple yet powerful CloudBolt Catalog using blueprints to any hypervisor or public cloud. Users and admins can customize the blueprints to manage the complete application lifecycle. CloudBolt makes provisioning, orchestration, and lifecycle management of resources repeatable, automated, and easy to control.

Simple & Extensible Architecture

Pluggable to its core, CloudBolt allows almost all aspects of its workflows to be customized. This means no longer waiting for features to be added to a roadmap. CloudBolt plug-ins are written as Python scripts to extend the platform easily and can be shared between CloudBolt workflows and stored in a source code repository such as GitHub or GitLab. CloudBolt's open architecture allows nearly unlimited possibilities for extension. It's easy to integrate with existing processes, yet it's upgrade safe.

Intelligent Security and Compliance Visualization

We understand that security and compliance is of paramount importance to you and your stakeholders. We help you continuously monitor existing applications environments to improve your security and compliance posture. Easily visualize your existing environments within seconds and then overlay over 300+ security checks for AWS Well-architected, CIS and PCI-DSS. Our Security Advisor works in the background to detect and alert you against any threats or vulnerabilities. You'll enhance your security posture, shift left your DevSecOps practices, and stay out of the news for any wrong reasons.

Branding

Make CloudBolt your own. Customize the look and feel with your brand. Add colors and logos to provide a seamless transition between your existing IT applications and CloudBolt.

What Our Customers Are Saying

“ Very simple deployment, easy rebranding, easy configuration. Lightning-fast. Very efficient, and accurate.

-CTO
Services Industry

“ Best tool in the industry and we can customize as per requirement in a short time, Company provides best support services whenever required.

-Project Manager

“ Rarely does a product offer a "win/win" the way CloudBolt has. This product has reduced significant overhead for our Operations team while providing our development groups the level of self-service they've desired for a long time.

-Manager, Internal IT
Healthcare Industry

“ Support is outstanding. CloudBolt has providing a tremendous platform that can literally do anything - even order a pizza ;) Our developers have yet to provide a use case that we couldn't' engineer.

-Sr. Systems Engineer,
Healthcare Industry

“ CloudBolt helps me manage my hybrid, multi-cloud environments while empowering me as a developer with self-service IT.

Network Engineer Services Industry

“ You can easily automate your requirements. It is very fast and efficient and very easy to use. We have saved a ton of time after using this platform. A huge thumbs up.

-Assistant Manager,
Communications Industry
