

CloudBolt Enables Multi-Cloud Operations Platform for Hamburg Süd

A leading brand in international logistics services, Hamburg Süd uses CloudBolt's integrable, flexible and customizable platform for self-service IT and easy resource provisioning.

Challenge

The challenge was to redesign the management and delivery of local and cloud services. Due to increasingly complex infrastructures and dynamic adaptations, the previous operating model faced a significant challenge.

With the introduction of Microsoft Azure, the focus shifted to the flexible use of services. Due to this, teams placed new demands on IT for flexible deployment, scaling and decommissioning their projects.

Solution

Hamburg Süd is a leading brand in the international logistics services sector, focusing on quality and customer service. That's why CloudBolt, with its integrable, flexible and customizable platform, offers the right framework to meet the needs of today and tomorrow.

CloudBolt's Cloud Management Platform enables Hamburg Süd to provide a wide range of cloud services from VMs, storage, and databases automatically within minutes. Thanks to this modular structure and individual service catalogue, together with CloudBolt partner Visorian GmbH, Hamburg Süd continuously expands and integrates the platform to map future requirements quickly and easily. The self-service model not only allowed a significant reduction in deployment times, but also provided a central platform for a holistic overview.

With a wide range of new features, such as definable actions and approval workflows within CloudBolt, existing processes have been simplified or completely redesigned. Together with Scholderer GmbH, Hamburg Süd defined future-proof multi-cloud service descriptions and an individual multi-cloud service portfolio.

Benefits

- ✓ Service catalogue with 1-click ordering
- ✓ Visibility and control over Azure
- ✓ Insight into the use and costs of cloud services
- ✓ Improved operational efficiency by using a single user interface
- ✓ 2-4 weeks resource provisioning process reduced to 10 minutes
- ✓ Branded self-service portal with multi-cloud blueprints and approval workflows
- ✓ Consistent and secure access to cloud providers, container services and applications
- ✓ Direct scaling and automatic shutdown of more than 400 VMs and management of Azure Cloud Services
- ✓ 97% fewer tickets for provisioning of services
- ✓ 40% of existing processes became obsolete

An amazing hybrid cloud management platform that can handle all the demands.

-Sebastian Mornhinweg, Azure Infrastructure Architect

CloudBolt is the next evolution in systems automation.
